- The Google Map interface is very nice, but I have some trouble selecting the start and destinations.
- I tried to input a ride and then I tried to find a ride, and then I get a "TypeError: trip.driverDetails is undefined".
- Changes can be made to the interface of website
- Try getting the pop up of MAP to just display and change dynamically
- Good idea on dynamic user profile.
- Change button names add more description
- Add about us page
- Add privacy page to add a sense of security.
